Front and Side View of Found Silver Object.

This silver object was found on the beach. I have been unable to identify it. It appears that a wreath is stamped on the front under the more heavily stamped 'S'. It is about the size of a button, but there is no sign of a shank or place for a shank. It is a high grade of silver (gold tested). It weighs 19 grams.

Tips from the Pros

"Chest mounted MXT"

This mod was designed for the White's MXT but can be used on several different detectors.

Place or Event to Check Out in or around Michigan "Sled Hills, a repost"

As the winter finally winds down, it's a good time to hit those very used sled hills. Lots of coinage and jewelry lost during the long cold winter from kids as well as adults sliding or tumbling down those hills. Be the first to hit these places as the snow melts and the ground thaws. Slopes for sledding can be found just about anywhere you look, parks, schoolyards and out in country fields. As a side note, try your luck at shopping mall parking lots. Check out those snow piles from plowed lots.

... Item found last Month by One of our Members, continued from page 1. (Story from December 6th 2009)

Well yall the year is winding down and it's getting cold but we are gonna dig till we can't. So here it is got out Saturday went back to the place i got all the quarters last weekend and all clad for me at the first spot. Sharon did get a silver Washington quarter 1959 but i was not thrilled with detecting for almost three hours without getting silver, so we went back to the old stand by and i picked up 8 Wheaties and 2 mercs, that is No. 99 and 100. 1943 merc and 1919-D .

So today we went back to the stand by and Detected hard from 12:00 till dusk and Sharon found a silver rosey 59 and some relics and Wheaties.

I found a 1941 Merc and my first gold ring of the year sure was nice to see it in the hole it's a Black onyx 10-k size 10 1/2 or 11.

More info on this topic can be found on the GLMDing forum. ([Click Here](#))

... Tips from the Pros, continued from page 2.

This is the mod that I made on my MXT to chest mount it. First I had to drill out the rivets inside the box to remove the old stem. Be careful not to drill into the wires that go to the display. I used the wires from the box to the display and did not shorten them. I used a piece of aluminum 3/4" wide and 3/16" thick about 4" long to attach the display to the box. This has to be drilled and a thread tapped the match the screw that holds the display on to the old stem. The aluminum has to be bent at an angle so that the display sets at about a 90 degree angle to the box. The wires from the display to the box runs on top of the aluminum strip. The short piece of tubing is from an old detector stem or you can use a piece of copper pipe 3/4" in dia. You have to cut a small rectangular hole in the tube to get the plug through that is on the wire harness. Also holes have to drilled in the tube to put screws through to the box to hold it together. I had to make a guard over the trigger switch so that it would not get caught on something. I used a piece of light aluminum strap and bent it to fit.

... Sled Hills, continued from page 3.

Here is a list or suggestion as to where to find popular sledding hills:
